

Developing Next Generation Programmed T Cell Therapies

June 2024

Disclaimer

These slides contain forward-looking statements within the meaning of the “safe harbor” provisions of the Private Securities Litigation Reform Act of 1995. Forward-looking statements are statements that are not historical facts, and in some cases can be identified by terms such as “may,” “will,” “could,” “expects,” “plans,” “anticipates,” and “believes.” These statements include, but are not limited to, statements regarding Autolus’ development of its product candidates, including the obe-cel program; the profile and potential application of obe-cel in additional disease settings; the future clinical development, efficacy, safety and therapeutic potential of the Company’s product candidates, including progress, expectations as to the reporting of data, conduct and timing and potential future clinical and preclinical activity and milestones; expectations regarding the initiation, design and reporting of data from clinical trials and preclinical studies; the extension of the pipeline beyond obe-cel; expectations regarding the regulatory approval process for any product candidates; the benefits of the collaboration between Autolus and BioNTech, including the potential and timing of milestone payments and royalties under the terms of the strategic collaboration; the Company’s current and future manufacturing capabilities; and the Company’s anticipated cash runway. Any forward-looking statements are based on management’s current views and assumptions and involve risks and uncertainties that could cause actual results, performance, or events to differ materially from those expressed or implied in such statements. These risks and uncertainties include, but are not limited to, the risks that Autolus’ preclinical or clinical programs do not advance or result in approved products on a timely or cost effective basis or at all; the results of early clinical trials are not always being predictive of future results; the cost, timing and results of clinical trials; that many product candidates do not become approved drugs on a timely or cost effective basis or at all; the ability to enroll patients in clinical trials; and possible safety and efficacy concerns. For a discussion of other risks and uncertainties, and other important factors, any of which could cause Autolus’ actual results to differ from those contained in the forward-looking statements, see the section titled “Risk Factors” in Autolus’ Annual Report on Form 10-K filed with the Securities and Exchange Commission, or the SEC, on March 21, 2024, as well as discussions of potential risks, uncertainties, and other important factors in Autolus’ subsequent filings with the Securities and Exchange Commission. All information in this presentation is as of the date of the presentation, and Autolus undertakes no obligation to publicly update any forward-looking statement, whether as a result of new information, future events, or otherwise, except as required by law. You should, therefore, not rely on these forward-looking statements as representing the Company’s views as of any date subsequent to the date of this presentation.

Autolus overview – scaling towards commercialization

Building a leading CAR T company developing therapies for cancer and autoimmune diseases

Obe-cel: a potentially best-in-class CAR T

- FELIX pivotal trial in r/r adult ALL showed high ORR, encouraging EFS and favorable tolerability with low levels of high-grade CRS and ICANS
- PDUFA target action date November 16, 2024
- EMA filing submitted

Pipeline expansion strategy

- Expand obe-cel opportunity in B cell malignancies, autoimmune diseases & life cycle strategy
 - SLE
 - B-NHL indications
 - Bi-specific therapies (CD19 /CD22; CD19/BCMA)
- Expand to additional indications with novel CAR T therapies, alone or with partners

Scalable manufacturing and in-house facility

- Demonstrated reliable clinical trial supply (96% target dose reached in FELIX pivotal study)
- New commercial cell manufacturing facility in qualification stage; planned annual capacity 2,000+ batches
- Expected vein-to-delivery time at launch of ~16 days

Strategic collaborations

- Strategic multi-platform R&D collaboration with BioNTech
- Established technology collaborations with Moderna, BMS and Cabaletta
- Long-standing academic collaboration with University College London

Strong cash position

- Cash and cash equivalents \$759M end of Q1 2024
- Fully funds obe-cel launch in adult ALL and allows for autoimmune program acceleration

LEAD CLINICAL PROGRAM

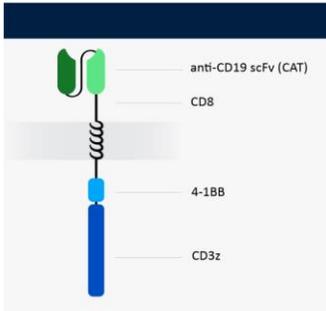

Obe-cel

A standalone, potentially best-in-class
CD19 CAR T cell therapy candidate

We believe obe-cel has a unique mechanism of action

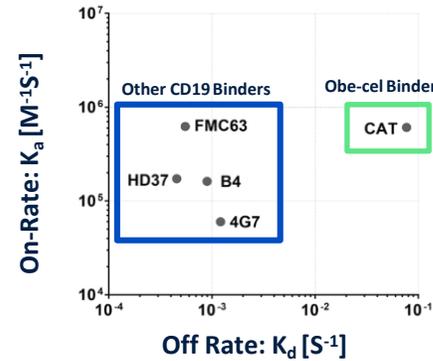

Designed for increased activity and reduced toxicity

Differentiated CD19 binder

CD19 binder with fast off-rate

Fast off-rate

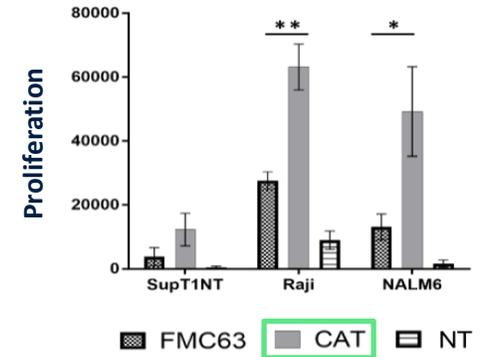

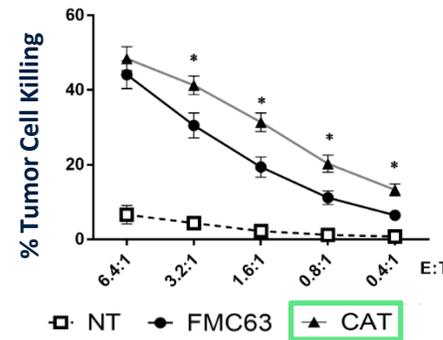

Shorter half-life of interaction compared to binders used in approved products

- obe-cel = 9.8 seconds
- Kymriah® = 21 minutes

Potential for improved potency, reduced toxicity

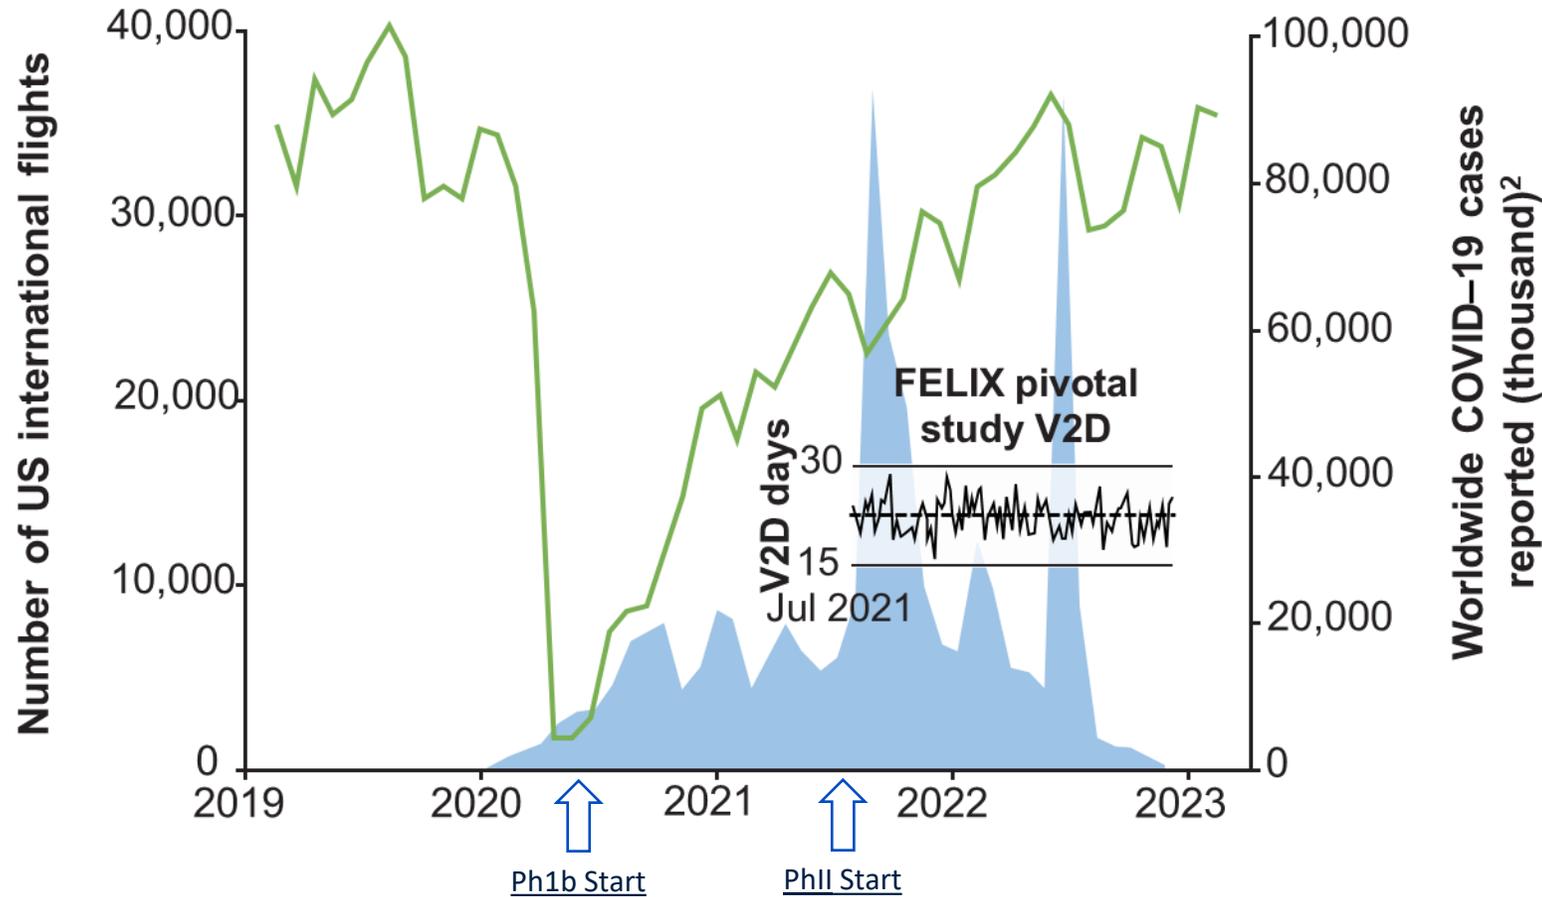

- Avoided over-activation of CAR T cells → Reduced toxicities
- Increased CAR T peak expansion → Improved persistence
- Avoided exhaustion of CAR T-cells → Improved engraftment
Improved persistence

Enhanced cytotoxicity and proliferation

The FELIX phase 1b/2 study

Reliable obe-cel supply for FELIX despite the COVID-19 pandemic

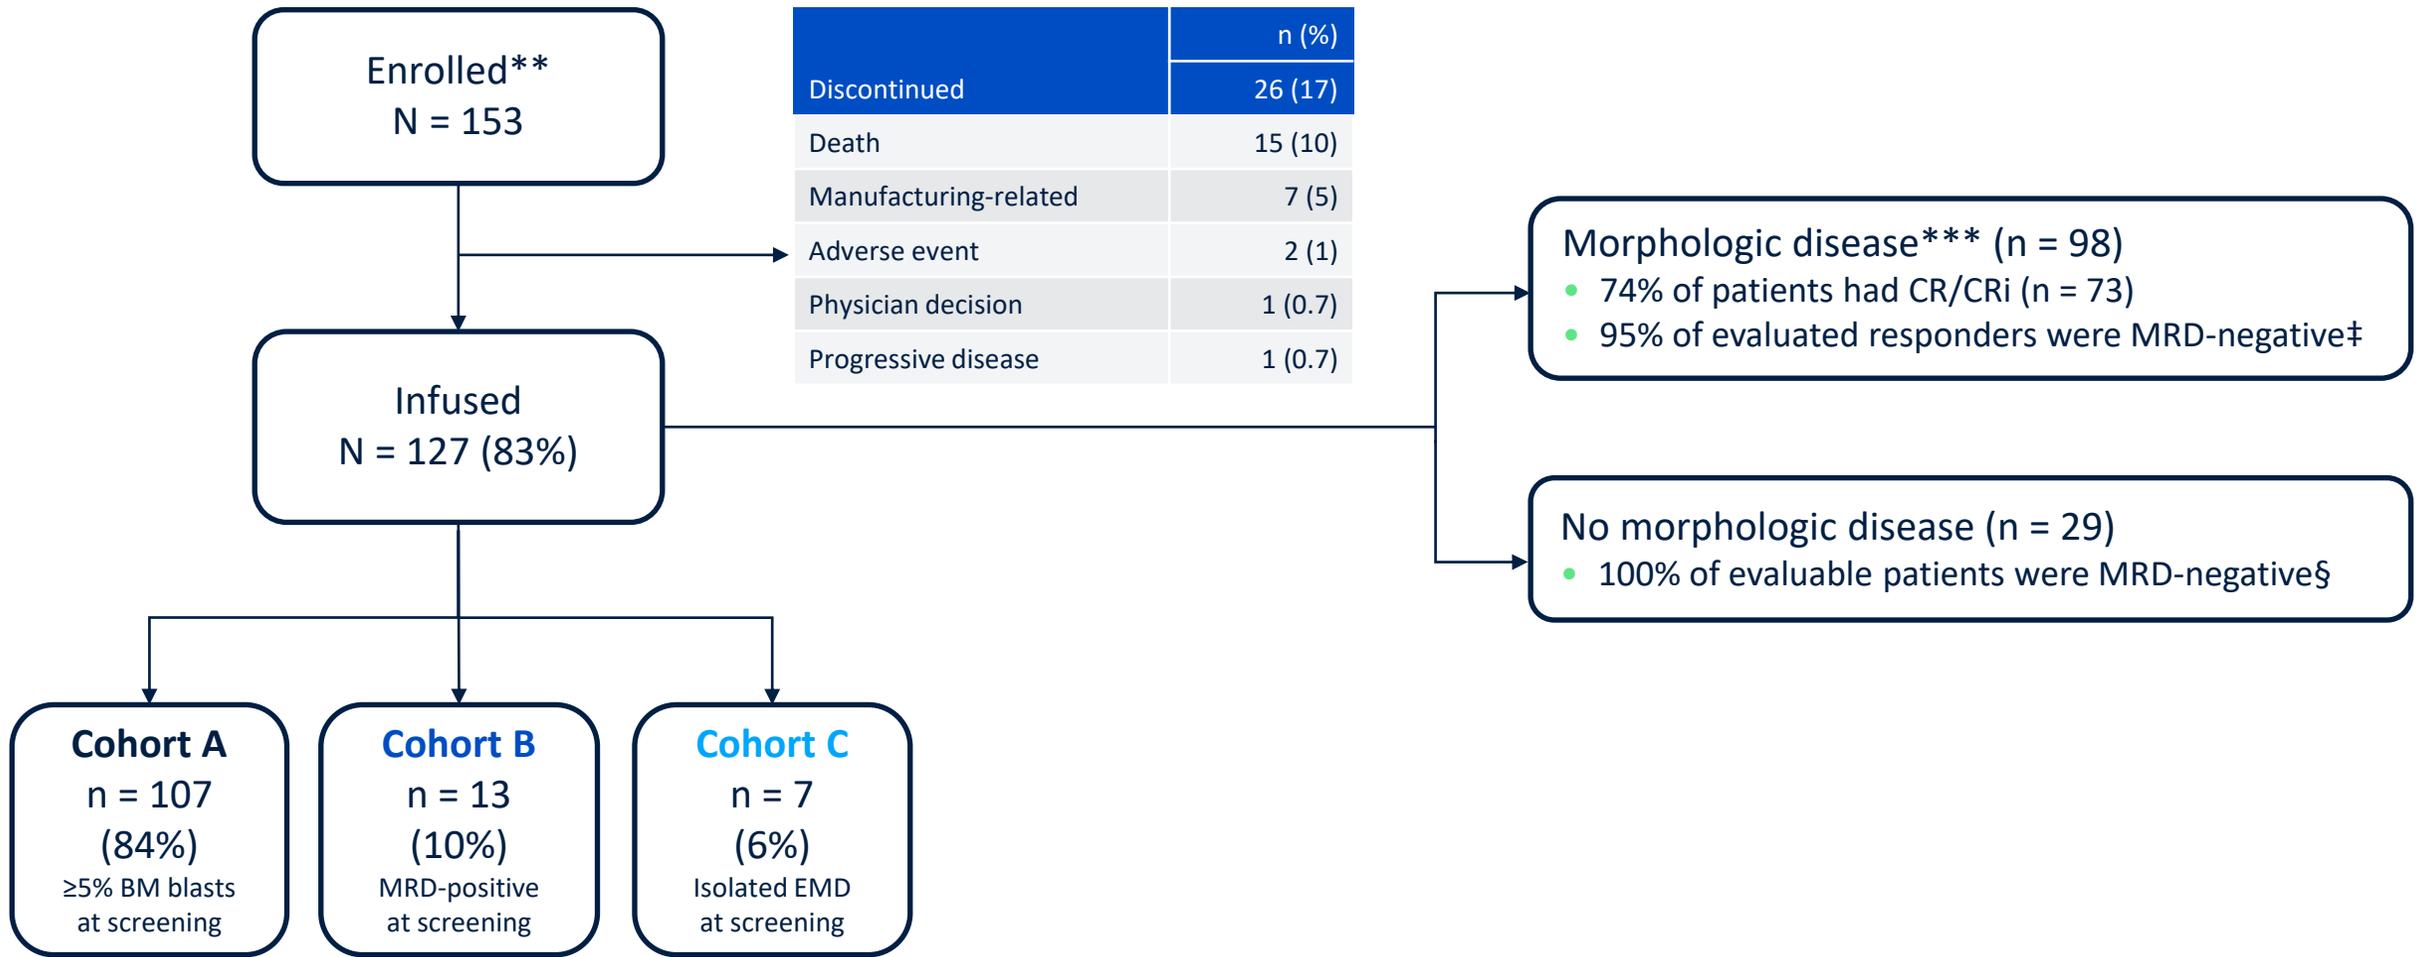

- US international airline flights decreased by 41% compared to flights from pre-COVID-19 pandemic¹
- BUT international flights are reliable and on time
- Sample collection and drug product delivery were successfully maintained, with no batches impacted

²World Health Organization COVID-19 dashboard [online]. Available at: <https://covid19.who.int/> Accessed October 2023

FELIX Phase 1b/2 pooled analysis: patient disposition

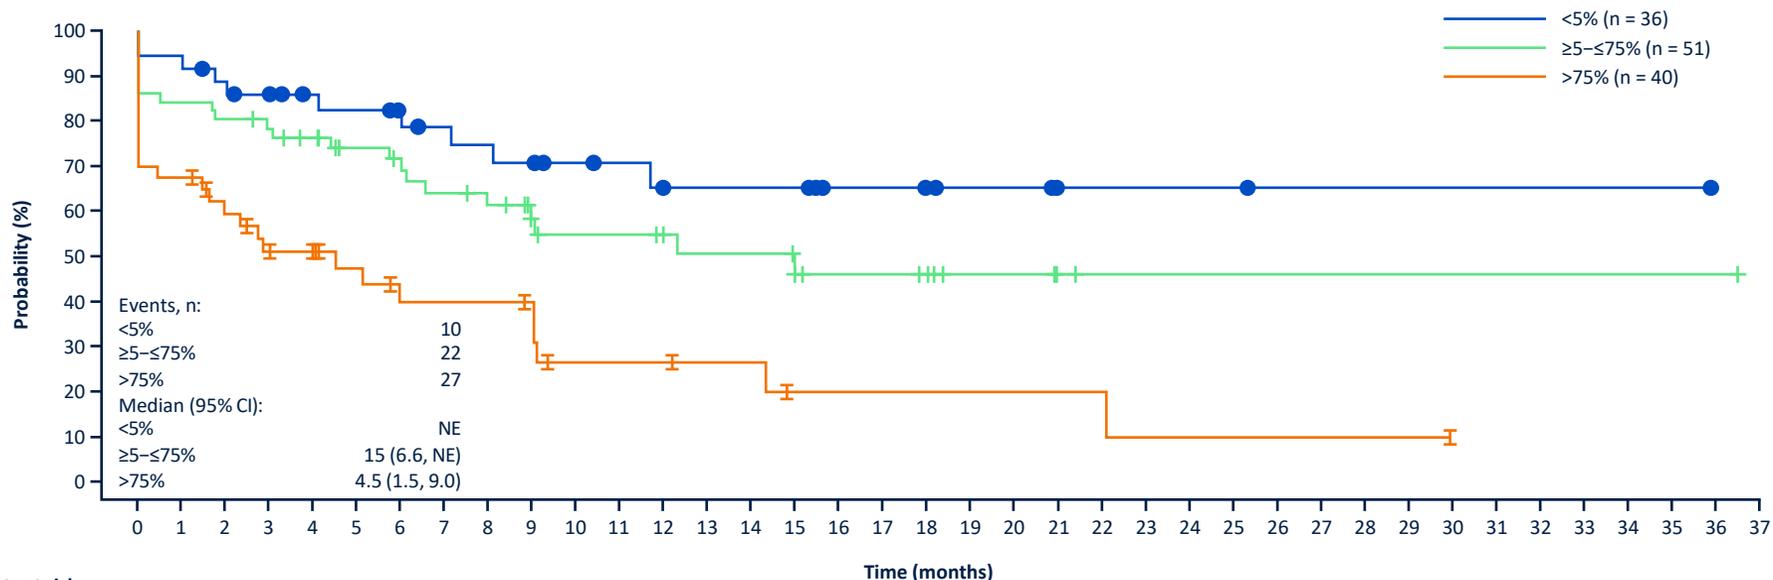

127/153 (83%) enrolled patients received obe-cel*

*Seven patients received Dose 1 only; **All eligibility criteria met and the leukapheresate accepted for manufacturing; obe-cel, obecabtagene autoleucel; Roddie et al., ASH 2023, Data cut-off date: September 13, 2023; ***Morphologic disease defined as ≥5% BM blasts or presence of EMD regardless of BM blast status; †MRD status available for 64/73 patients, as assessed by NGS or flow cytometry; §MRD status available for 27/29 patients, as assessed by NGS or flow cytometry; BM, bone marrow; CR, complete remission; CRi, CR with incomplete hematologic recovery; EMD, extramedullary disease; MRD, measurable residual disease; NGS, next-generation sequencing; obe-cel, obecabtagene autoleucel

ASH2023: EFS by leukemic burden prior to lymphodepletion*

Lower leukemic burden is associated with better outcomes

Patients at risk

	0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31	32	33	34	35	36	37	
<5% (n = 36)	36	34	31	28	25	24	22	20	19	18	14	13	11	11	11	11	8	8	7	6	6	2	2	2	2	2	1	1	1	1	1	1	1	1	1	1	0	0

BM blasts % prior to lymphodepletion	<5% (n = 36)	≥5-≤75% (n = 51)	>75% (n = 40)
Median EFS (95% CI), months	NE	15.0 (6.6, NE)	4.5 (1.5, 9.0)
6-month EFS (95% CI), %	83 (65, 92)	72 (57, 82)	40 (23, 56)
12-month EFS (95% CI), %	65 (44, 80)	55 (38, 69)	27 (12, 44)

*Censoring new non-protocol anti-cancer therapies including SCT with disease assessment by IRRC (data cut-off date: September 13, 2023); BM, bone marrow; CI, confidence interval; EFS, event-free survival; IRRC, Independent Response Review Committee; NE, not evaluable; SCT, stem cell transplant; Roddie et al., ASH 2023

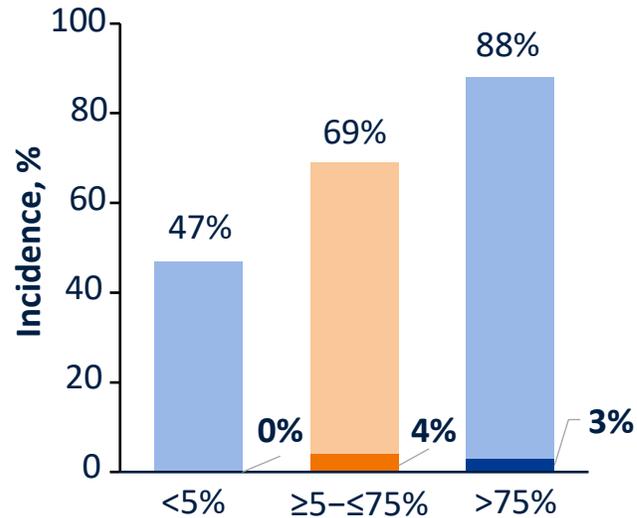

ASH2023 FELIX Phase 1b/2 pooled analysis: CRS and ICANS

Low rates of Grade ≥ 3 CRS and/or ICANS were observed

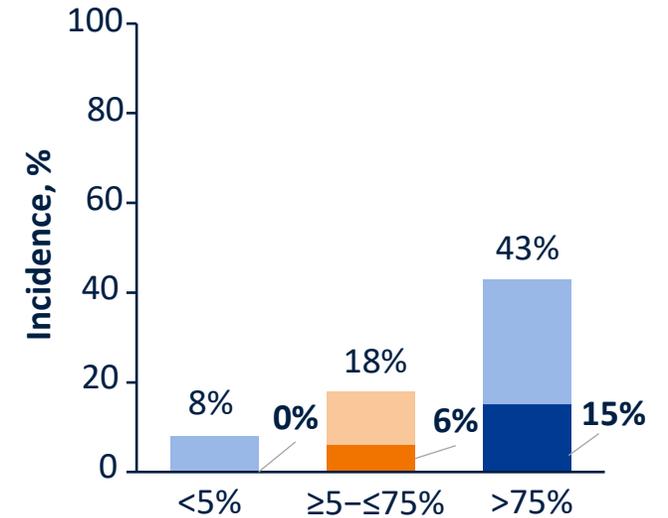

CRS and ICANS in all patients

CRS by % BM blasts

ICANS by % BM blasts

BM blasts % at lymphodepletion

Light colors = grade ≤ 2
Dark colors = grade ≥ 3

- No grade ≥ 3 CRS and/or ICANS were observed in patients with <5% BM blasts at lymphodepletion
- Vasopressors were used to treat CRS in 2.4% of patients
- The treatment was generally well tolerated
- Two deaths were considered treatment-related per investigator assessment: neutropenic sepsis (n = 1); acute respiratory distress syndrome and ICANS (n = 1)

ASH 2023 takeaway messages

- Obe-cel successfully manufactured in 95% of leukapheresed patients
- High remission rates independent of leukemic burden at lymphodepletion
- 50% EFS estimate at 12 months, with only 17% of responders proceeding to SCT while in remission
- Favorable safety profile: 2% grade ≥ 3 CRS and 7% grade ≥ 3 ICANS
- Severe toxicity mostly limited to patients with high leukemic burden at lymphodepletion
- Durable remission rates and toxicity inversely correlated with leukemic burden at lymphodepletion
- Assessment of leukemic burden at lymphodepletion is essential for risk/benefit stratification

OBE-CEL IN ADULTS WITH R/R B-ALL

ASCO 2024

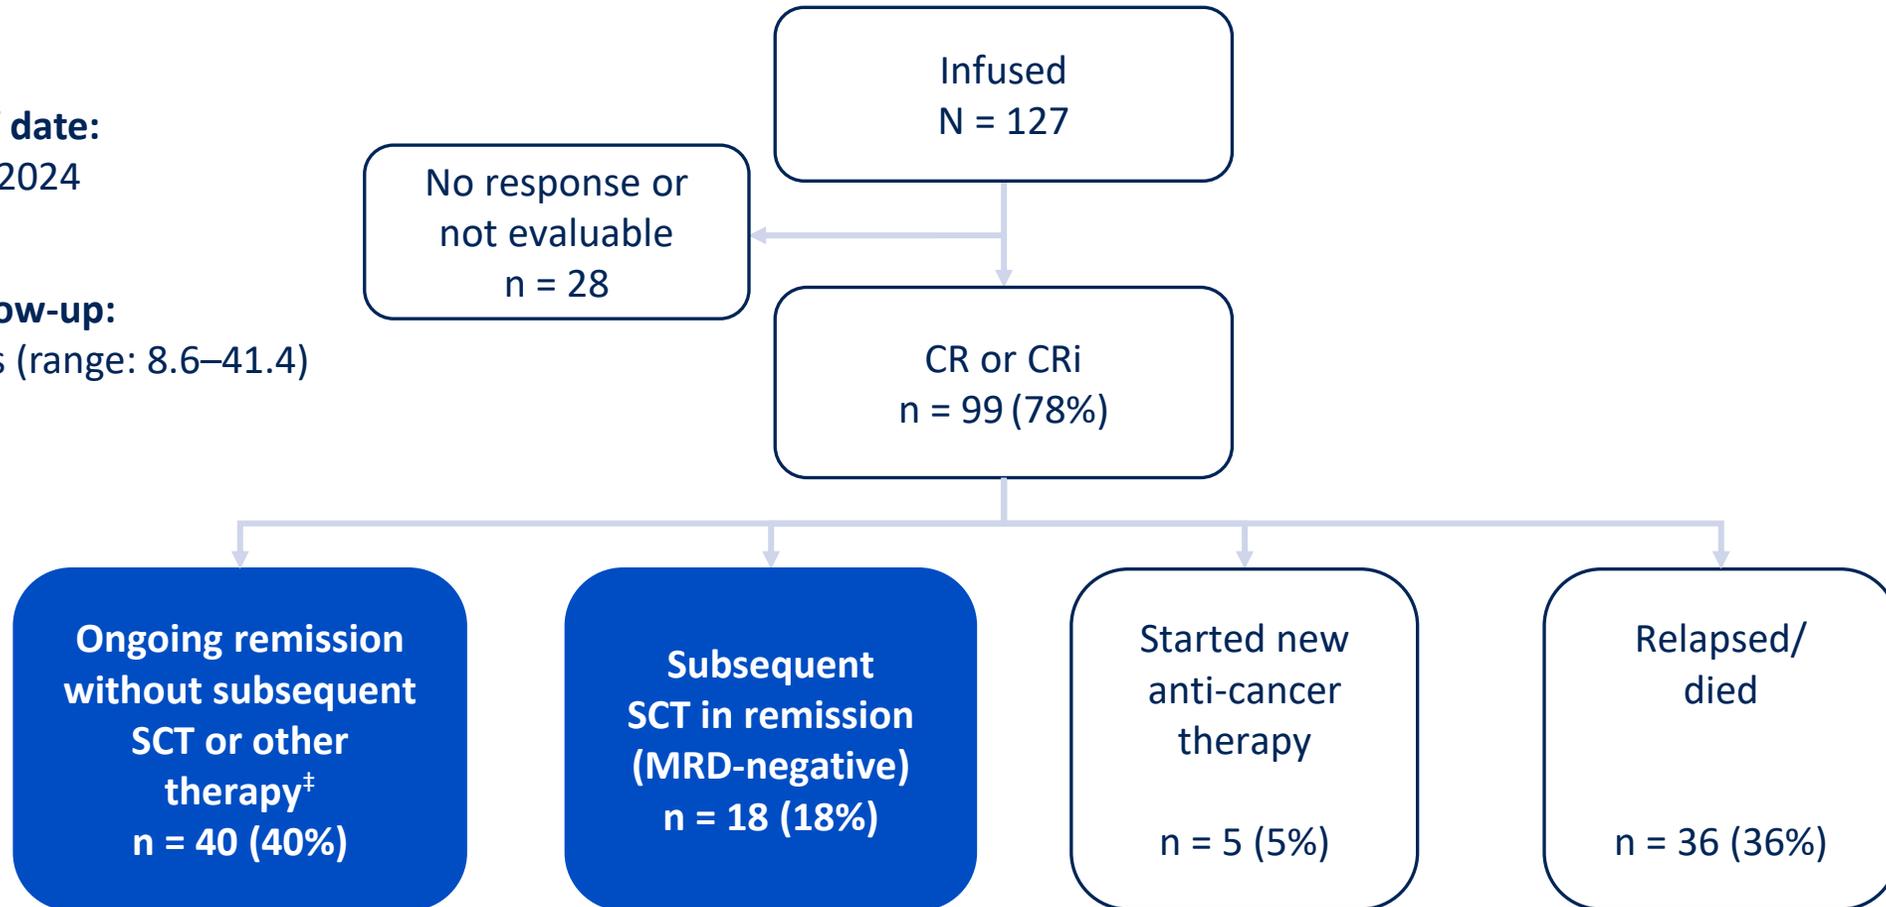

FELIX Phase 1b/2 trial

Majority of responders show durable response

40% of responders are in ongoing remission without consolidative SCT and 18% had consolidative SCT

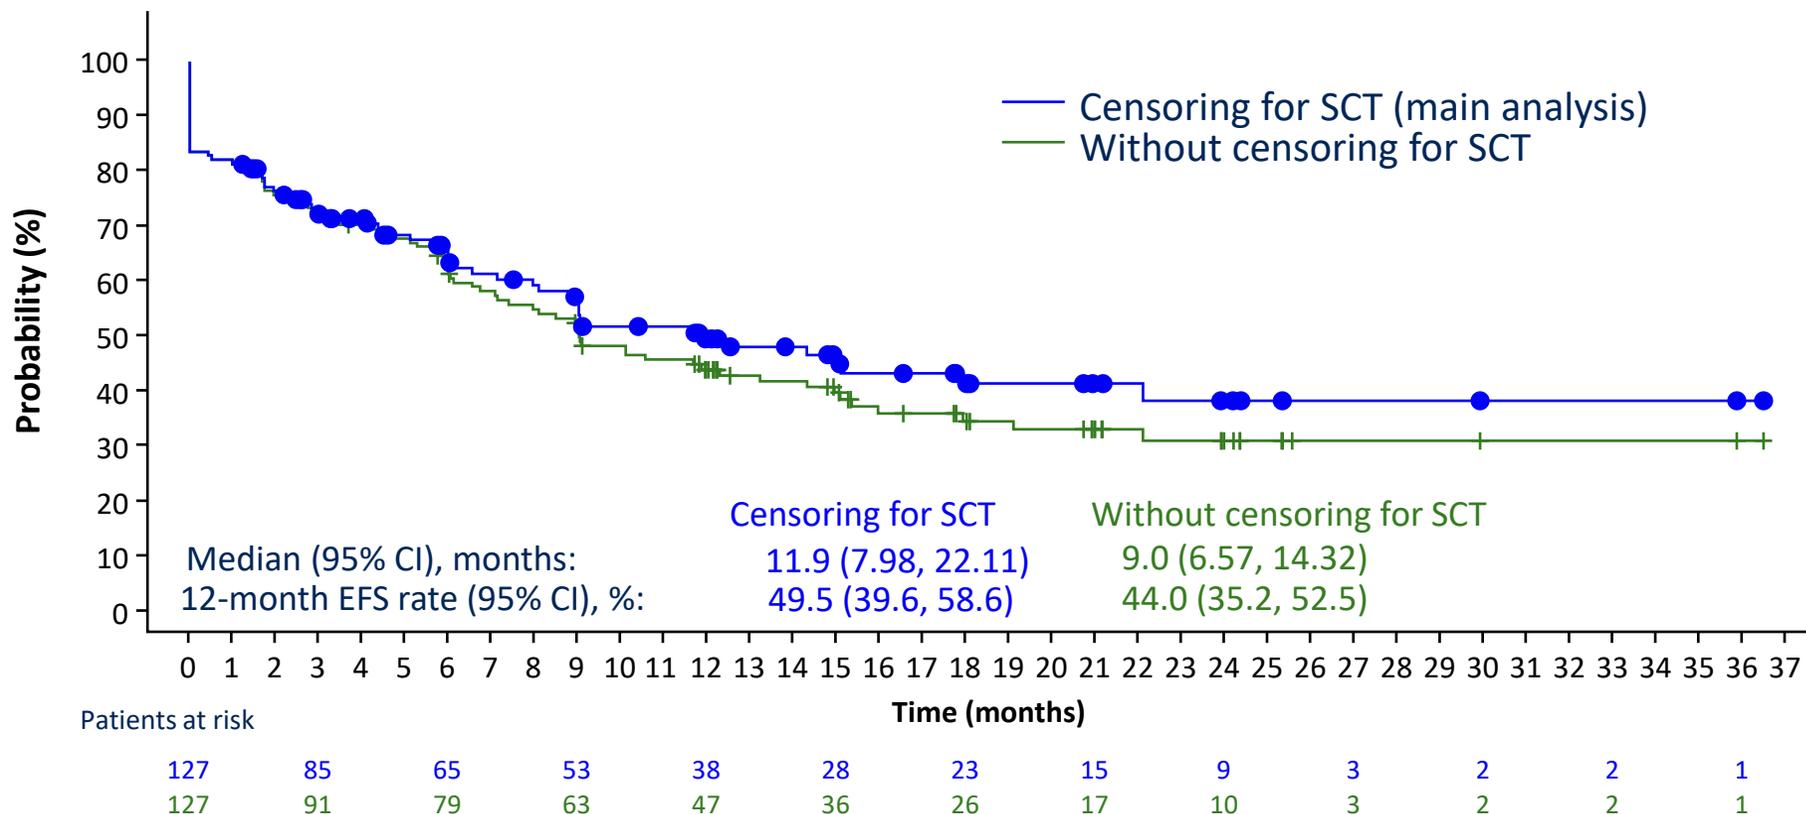

Data cut-off date:
February 7, 2024

Median follow-up:
21.5 months (range: 8.6–41.4)

Event-free survival

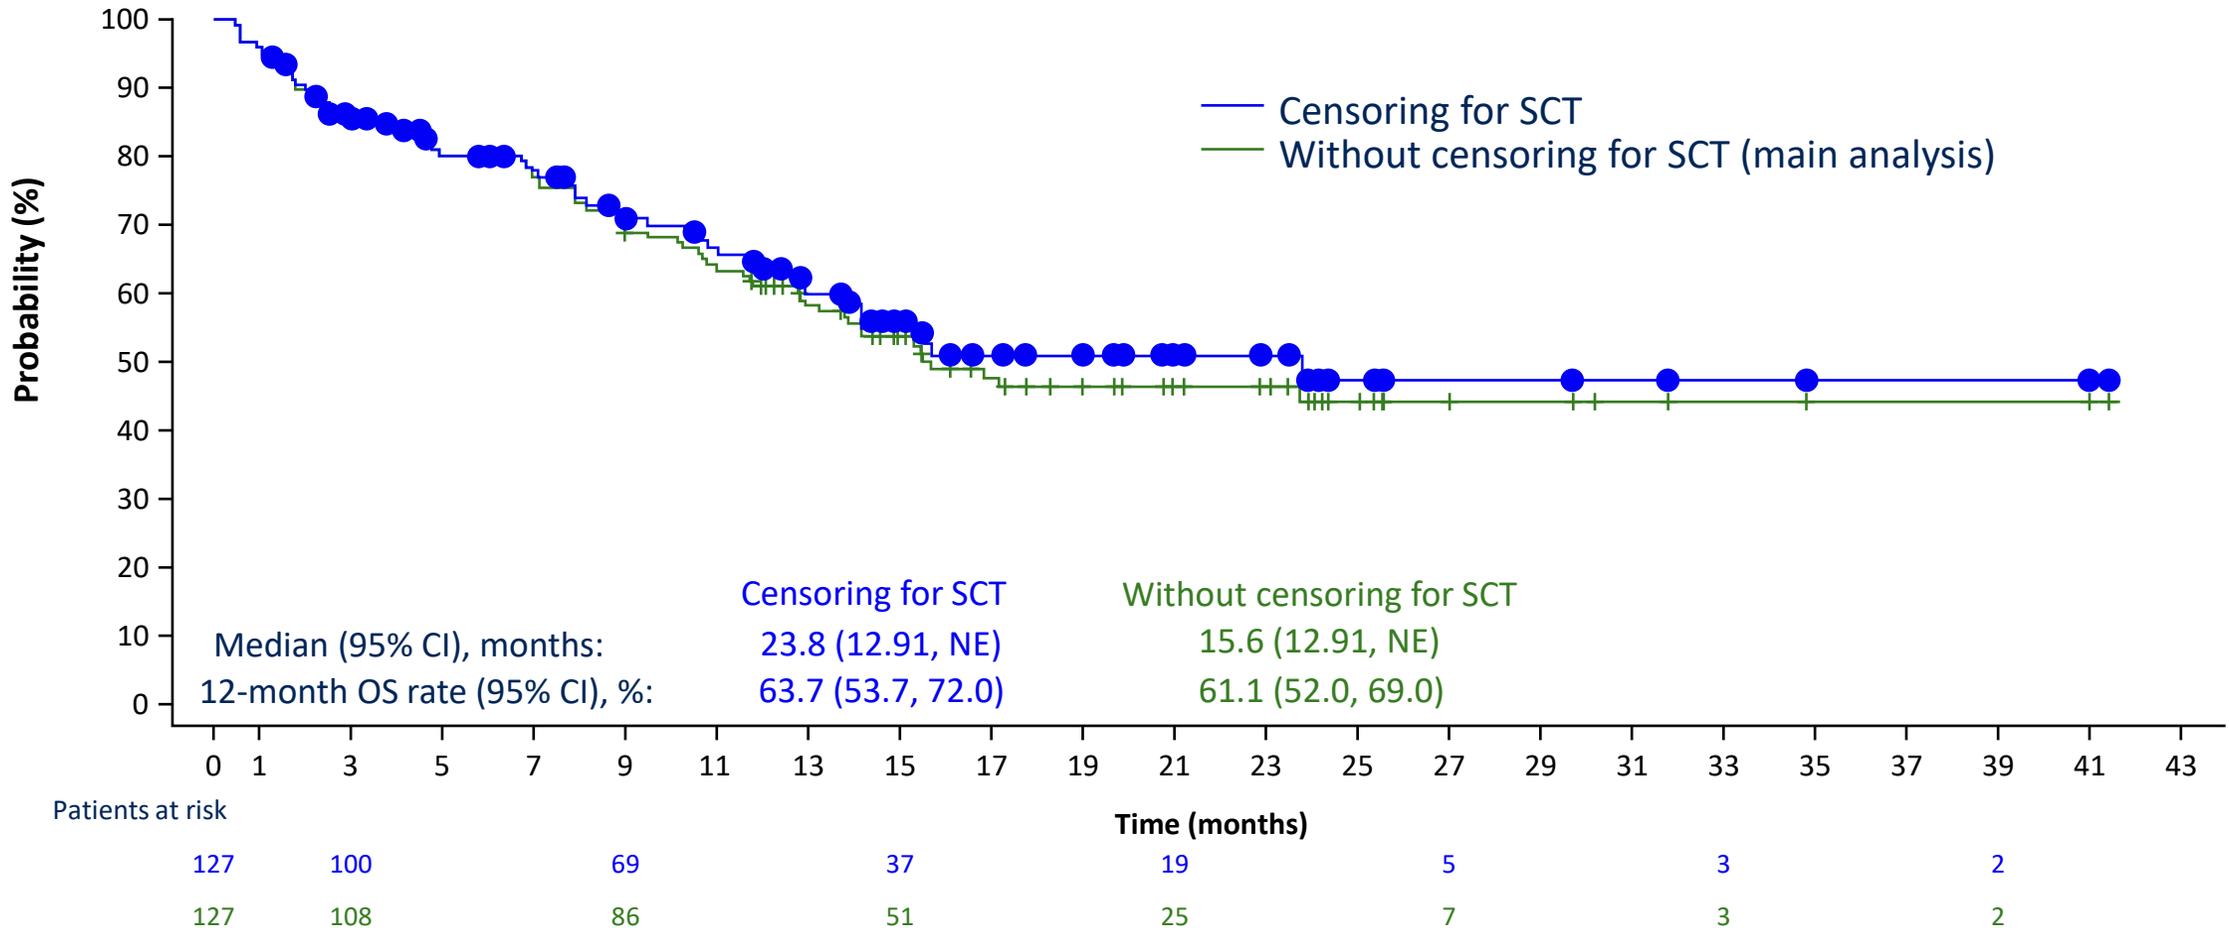

Subset of patients benefit from standalone treatment with obe-cel

- All (18/18) patients who had SCT in remission were MRD-negative
- 10/18 patients (55.6%) had ongoing CAR T persistence prior to SCT (n = 2 ongoing without event; n = 8 relapse or death)
- Characteristics similar between patients who did and did not undergo consolidative SCT

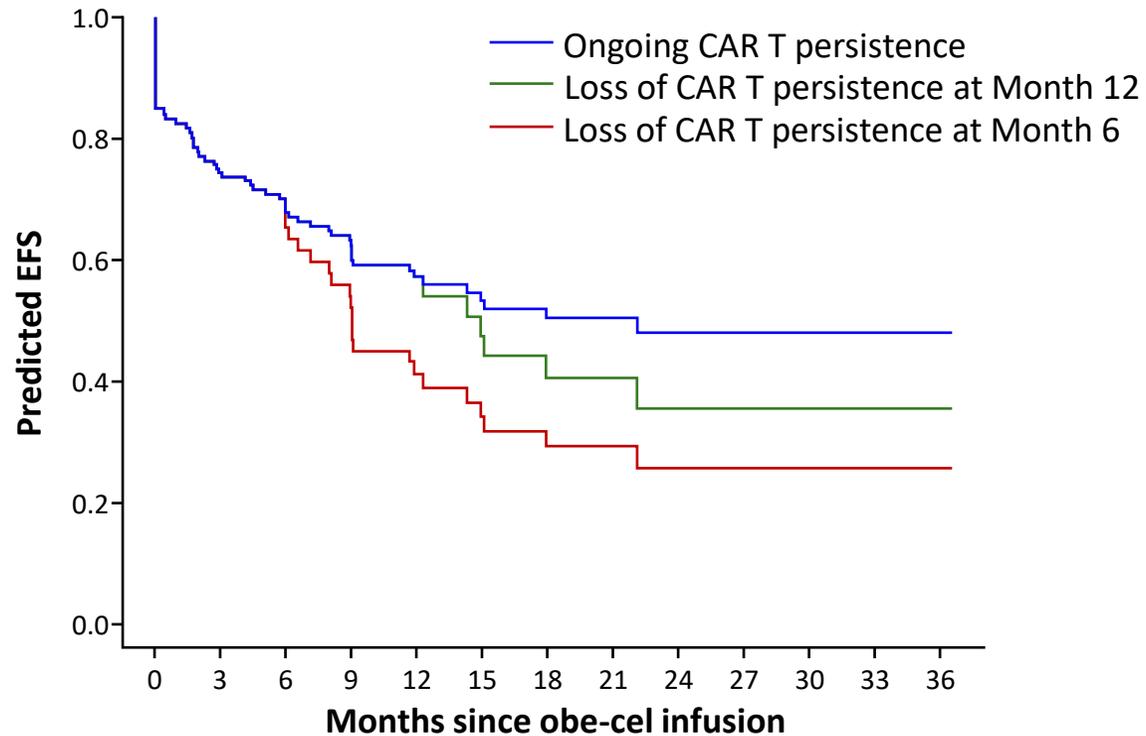

Overall survival

Potential long-term plateau

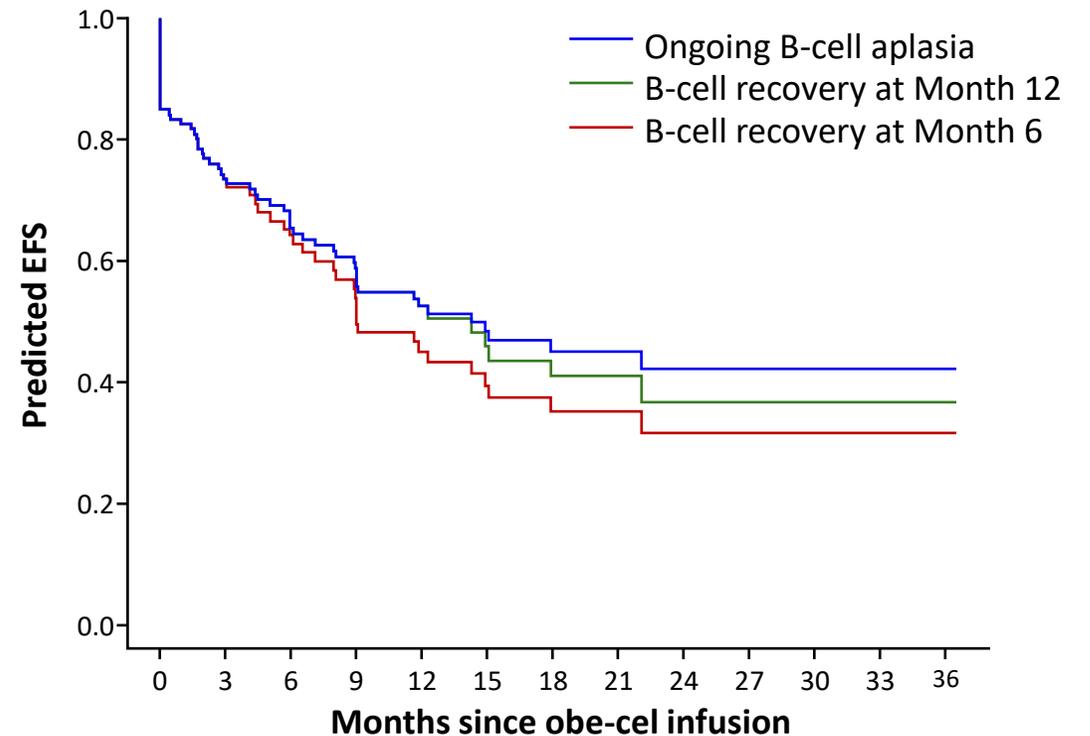

CAR T persistence and predicted relapse

Ongoing CAR T persistence correlates with long-term EFS

HR 2.7 (95% CI: 1.4, 5.3)

HR 1.7 (95% CI: 0.7, 3.8)

ASCO 2024 takeaway messages

- 40% of responders in ongoing remission without subsequent SCT/other therapy, with a median follow-up of 21.5 months
- Survival outcomes show potential of long-term plateau
- SCT consolidation in remission following obe-cel did not improve EFS or OS
- Ongoing CAR T persistence was associated with improved EFS

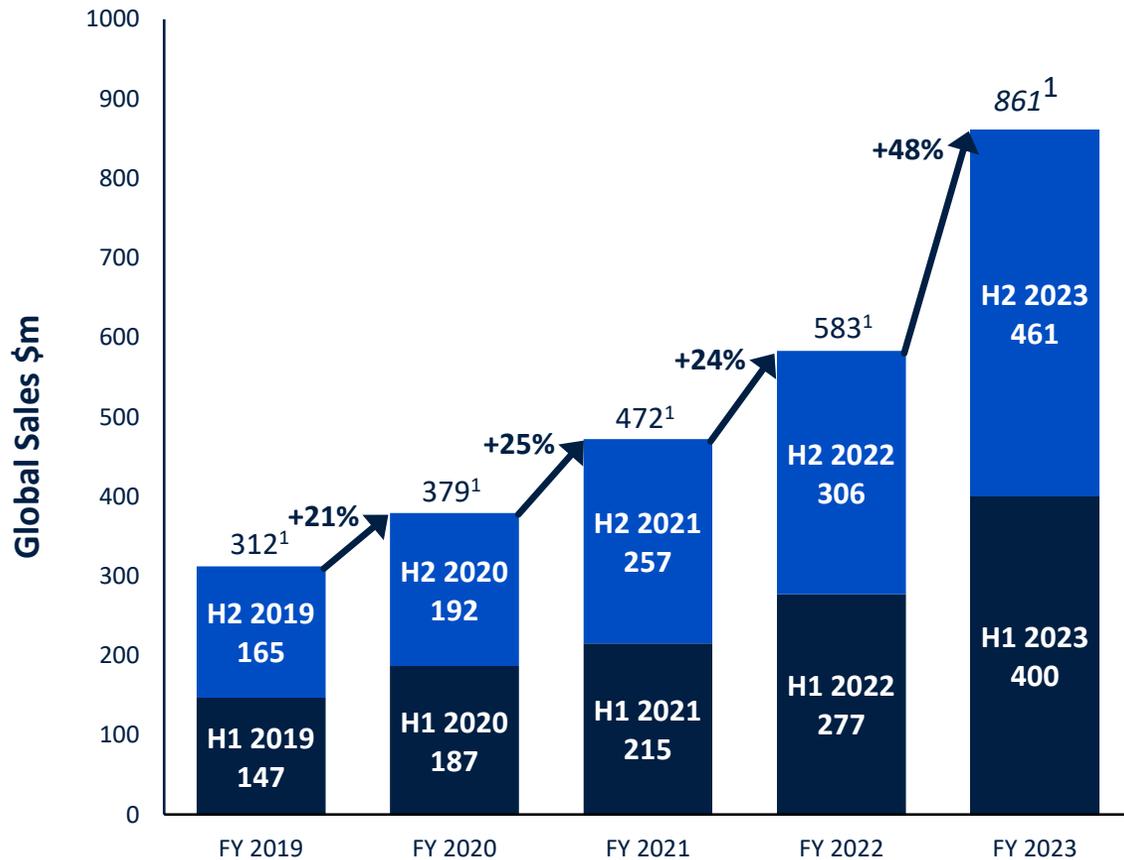

ALL: unmet need
and market overview

If approved, obe-cel could launch into an expanding ALL market

Blincyto[®], current market leader, sales increased 48% year-over-year to \$861 million for the full year 2023

Reported Blincyto[®] sales¹

- Blincyto[®] sales price estimated to be \$103,5k² (for 1 cycle) supporting approx >2,500 commercial adult ALL patients across all lines of ALL treatment. Sales increased 26% year-over-year to \$244 million for 1Q24
- Kymriah[®] is priced at \$582k in pediatric ALL. Breyanzi[®] is priced at \$487k in DLBCL³. Tecartus[®] is priced at \$462k³ for adult ALL
- Breyanzi[®] and other CAR T cell therapies are expanding delivery center footprint
- Tecartus[®] is expected to establish CAR T use in adult ALL
- If approved, obe-cel has the potential to be best-in-class curative therapy and expanding use beyond academic transplant centers

1. As per Amgen quarterly SEC filings

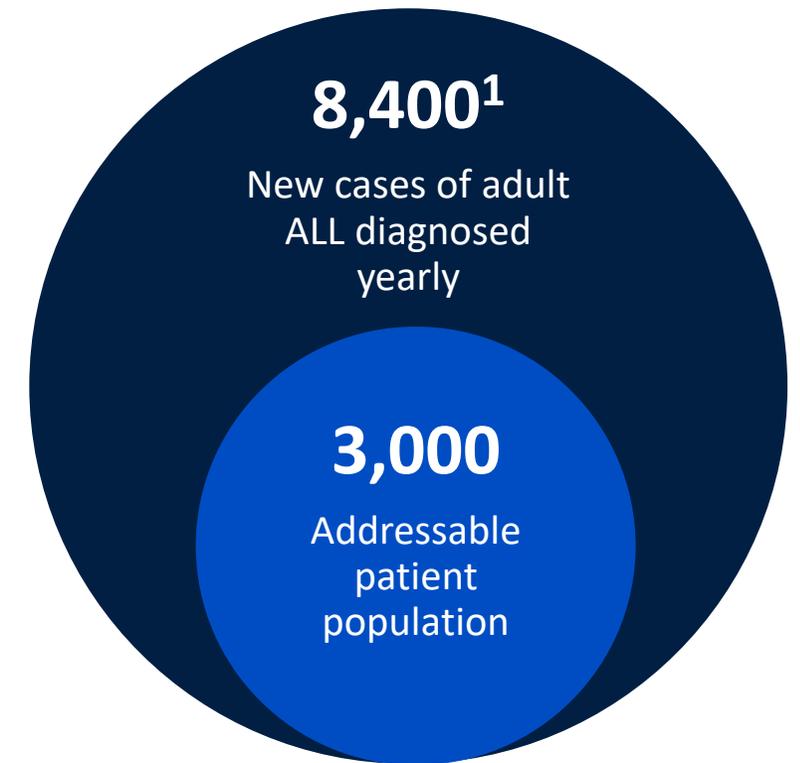

2. <https://www.cms.gov/medicare/payment/all-fee-service-providers/medicare-part-b-drug-average-sales-price/asp-pricing-files>

3. Red Book pricing database <https://www.ibm.com/products/micromedex-red-book/pricing>

Over 8,000 new cases of adult ALL annually worldwide

Successful therapy requires high level of activity and sustained persistence paired with good tolerability

- Median overall survival is < 1 year in r/r adult ALL
- Combination chemotherapy enables 90% of adult ALL patients to experience Complete Response (CR)
 - Only 30% to 40% achieve long-term remission
- Current T cell therapies for adult patients are Blincyto® and Tecartus®
 - Both therapies are highly active, but frequently followed by subsequent treatments (e.g. alloSCT)
 - Blincyto®: favorable safety profile, few patients experiencing severe CRS and ICANS, but limitations on convenience – continuous i.v. infusion during 4-week treatment cycles
 - Tecartus® more challenging to manage – induces elevated levels of severe CRS, a high levels of severe ICANS, and requires vasopressors for many patients
- Opportunity to expand the addressable patient population in earlier lines of therapy

Critical drivers for potential market adoption if approved

Clinical data¹

Durable and robust response as a standalone option

- The ORR (CR/CRi) in all patients who received obe-cel in the FELIX study was 78%¹
- The 12-month EFS and OS rates were 49.5% and 61.1% respectively (median follow up of 21.5 months)
- 40% of responders in ongoing remission without subsequent SCT/other therapy, (median follow-up of 21.5 months), suggesting long-term plateau

Predictable and manageable tolerability

- Low rates of Grade ≥ 3 CRS (2%) and low rates of Grade ≥ 3 ICANS (7%)

Treatment experience goals

Timely & reliable product supply

- Quality product with low out-of-spec rates
- Timely delivery
 - Sufficient capacity and manufacturing slot access
 - Short vein-to-release times

Best-in-class commercial systems and services integration

- Optimize relationship with accredited treatment centers

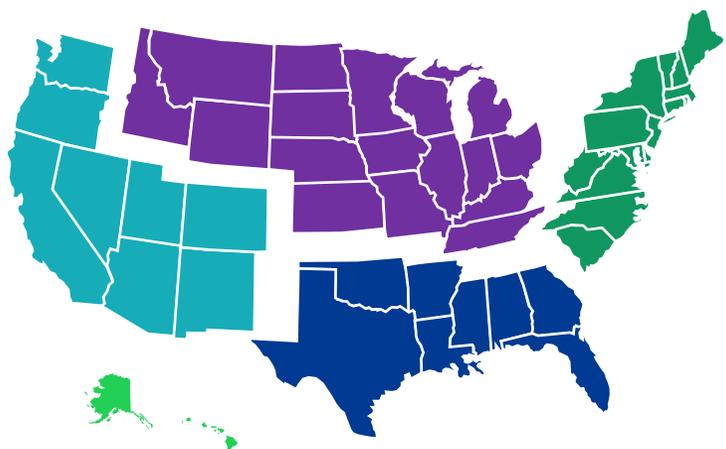

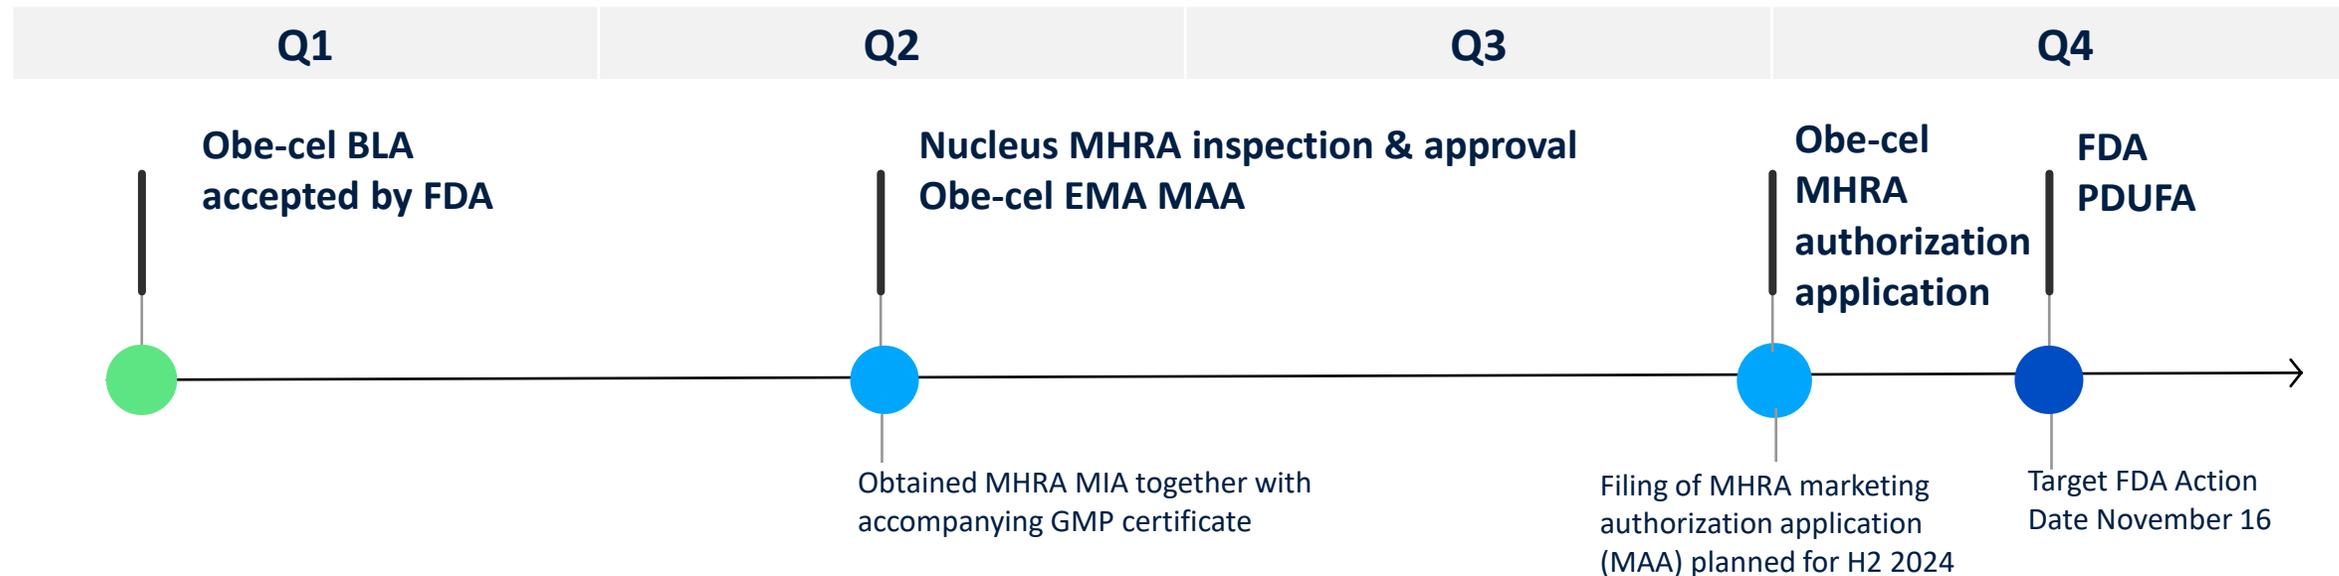

**Commercial Launch
Readiness Plan**

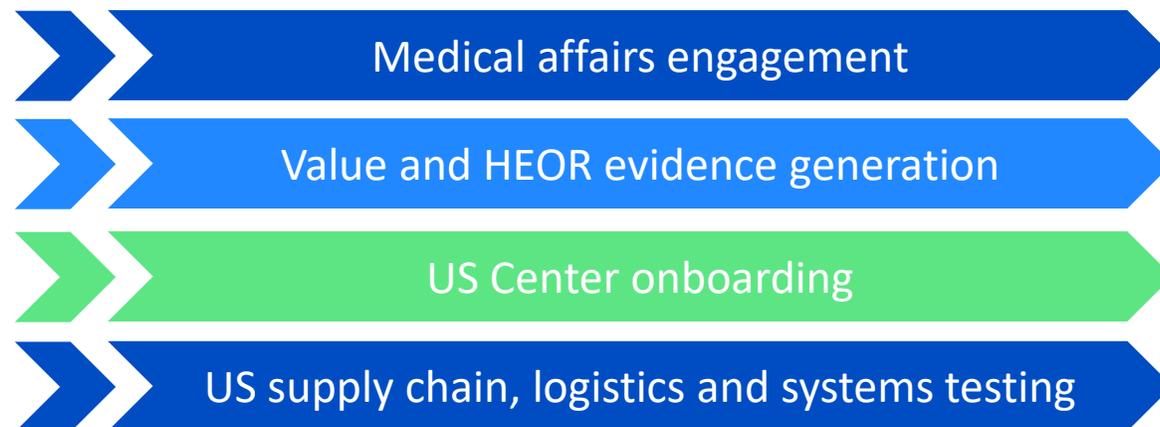

Commercial Launch Readiness

Obe-cel steps to commercialization

Roadmap to a commercial launch in r/r adult ALL

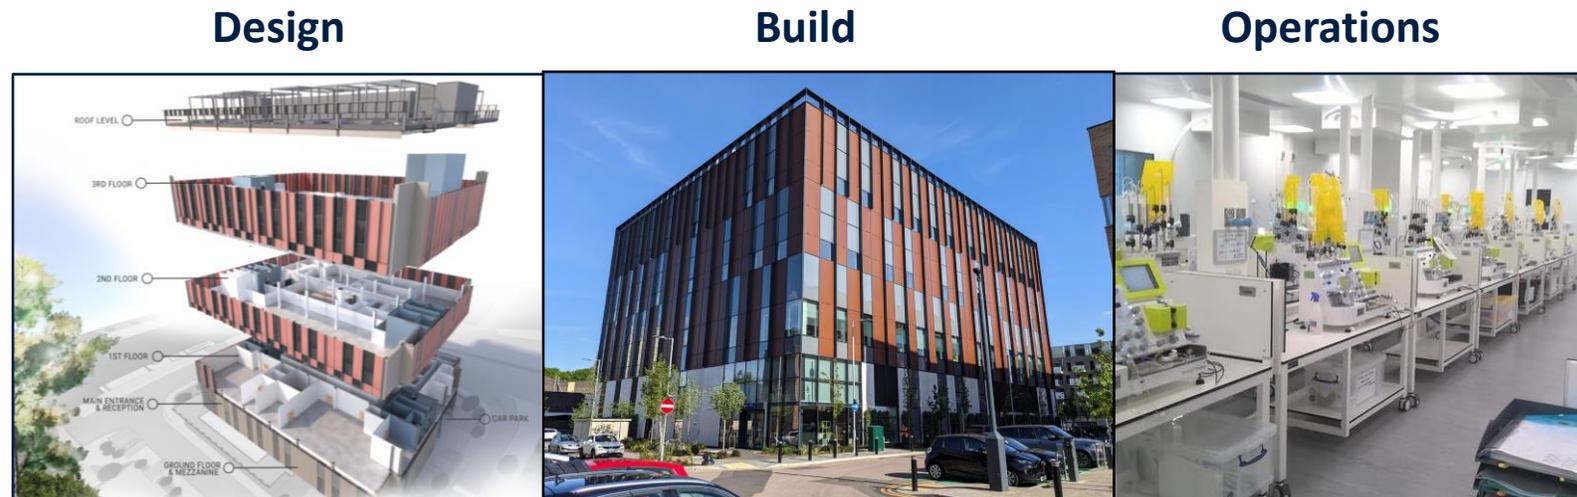

Commercial Readiness

The Nucleus – Our Commercial Manufacturing Facility

State of the art design and operations established – groundbreaking to complete validation in 2 years

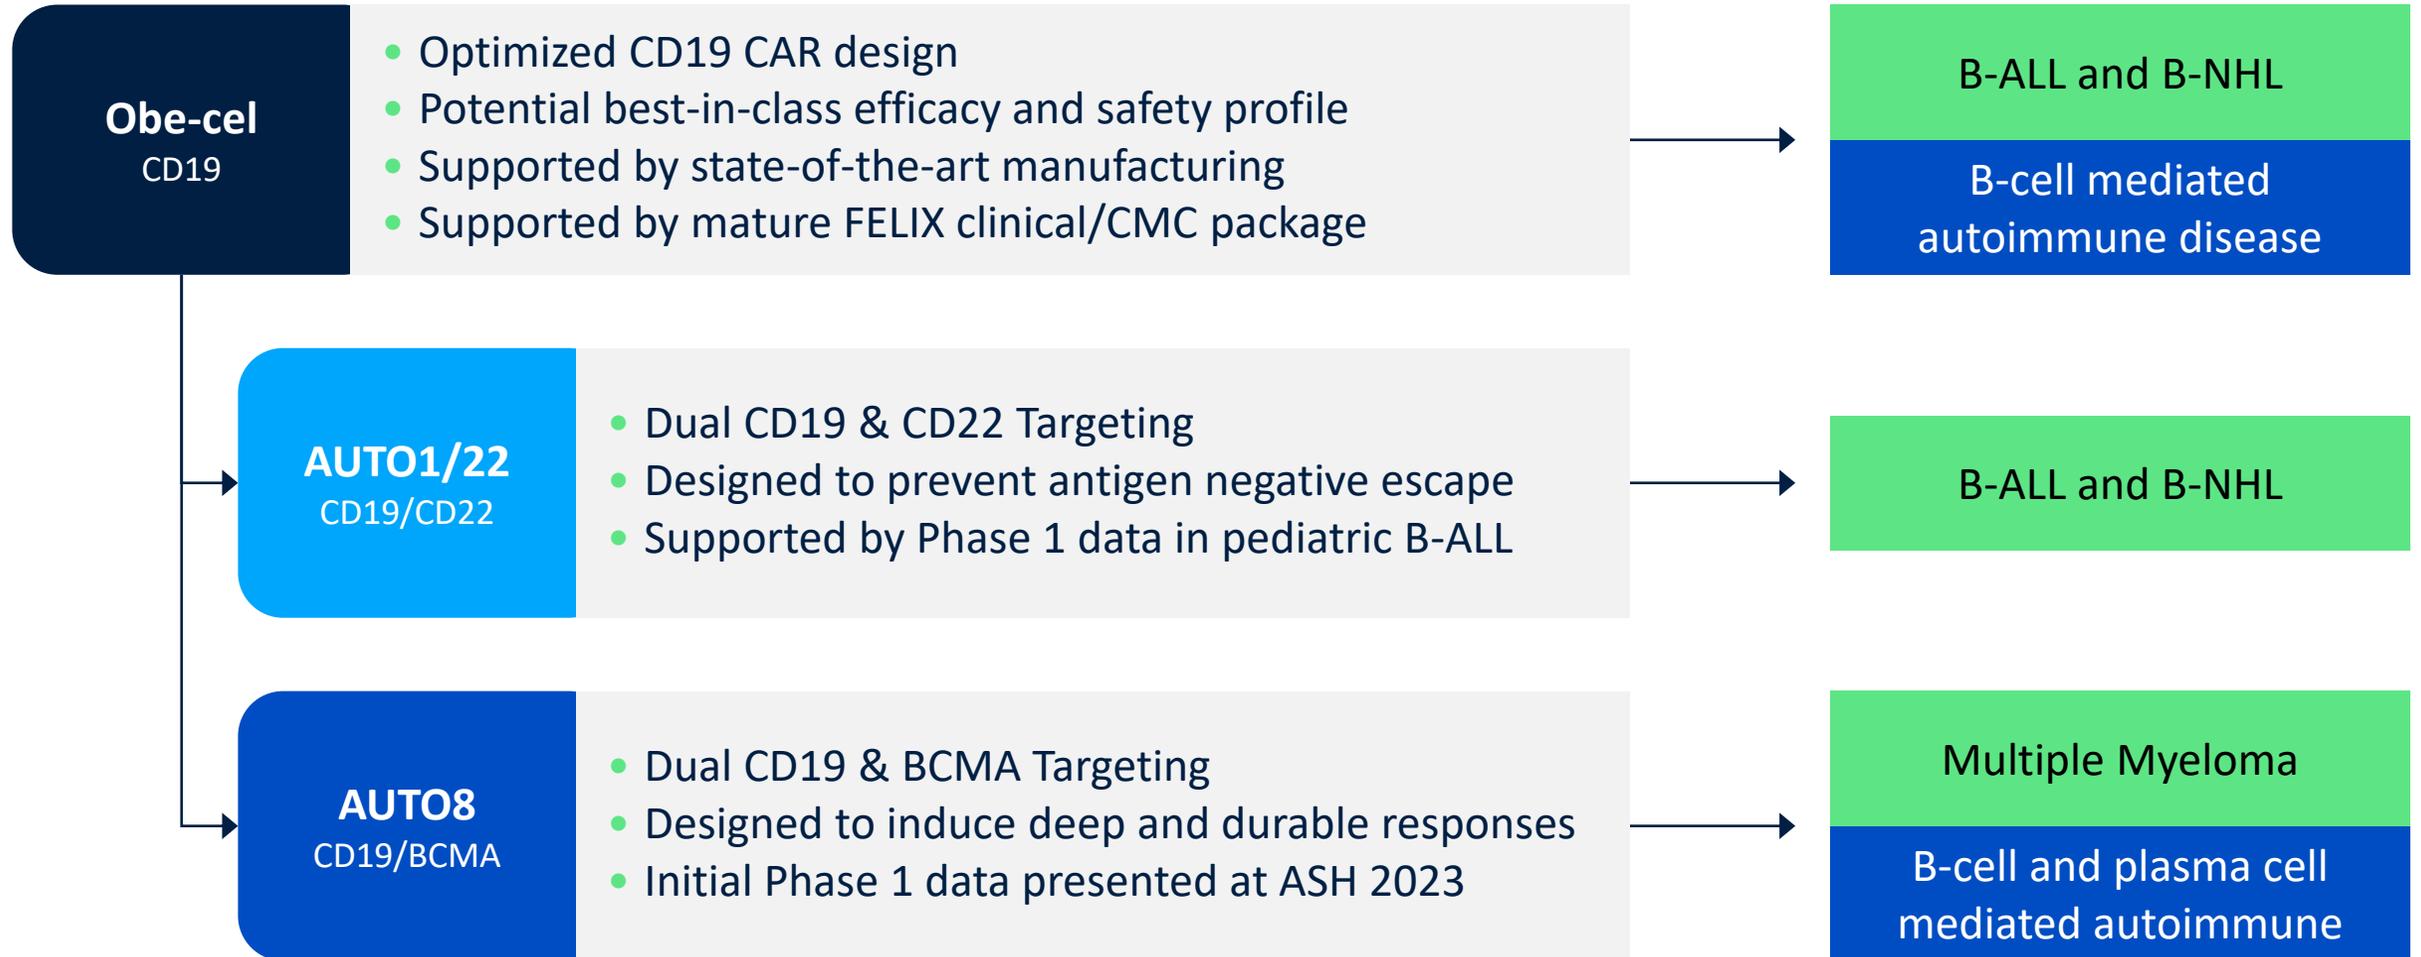

- ~70,000 sq ft facility
- Modular build using PAMs
- 70% built off-site
- 60% reduced build time
- BREEAM Excellent rating for sustainability
- Designed for 2,000+ batches per year
- Target vein to delivery time 16 days at launch

Expanding the obe-cel opportunity

Deep value program with potentially broad applicability

The obe-cel product family and franchise opportunity

Key features of obe-cel in NHL, AUTO1/22 in pALL and AUTO8 in MM

Obe-cel in NHL*

- 22 r/r NHL patients treated (DLBCL, MCL, FL)
- 21 of 22 patients achieved a metabolic CR
- No \geq grade 3 CRS and no ICANS of any grade reported
- Durable outcomes and CART cell persistence
- Majority of patients in ongoing remission with a median f/u of 21 months

AUTO1/22 in pALL*

- Kymriah ineligible r/r pALL patients (4 Kymriah failures, 3 CD19neg disease, 3 non-CNS extramedullary disease)
- Favorable adverse event profile with no severe CRS
- Excellent CAR T expansion and very encouraging activity:
- 83% MRD negative CR/Cri
- 1-year EFS 60%
- At median FU 8.7 months, no cases of leukemic relapse or emergence of MRD related to antigen escape

AUTO8 in r/r MM*

- 11 r/r MM patients treated
- No \geq grade 3 CRS and no ICANS of any grade reported
- ORR 100%; 3 PR*, 1 VGPR*, 7 CR*/sCR* (all evaluable MRD-)
- Two patients remained in sCR at >12 months; overall PFS was not reached
- Additional dose levels to be explored

*Roddie et al., ASH 2023 Poster 2114

*Ghorashian et al., EBMT Annual Meeting 2023

*Lee et al., ASH 2023

Phase 1 study in r/r SLE (CARLYSLE) – open for enrollment

Primary goal of the Phase 1 study will be confirming the fixed dose in adult SLE patients

CARLYSLE study

- A Single-Arm, Open-Label, Phase I Study to Determine the Safety, Tolerability and Preliminary Efficacy of Obecabtagene Autoleucel in Patients with Severe, Refractory Systemic Lupus Erythematosus (SLE)*

Study details

- Number of patients: 6 (option to add further cohort of 6 patients)
- Primary endpoint: to establish the tolerability and safety of obe-cel in patients with severe, refractory SLE
- Secondary endpoints: to evaluate the preliminary efficacy of obe-cel using measures of SLE disease activity
- Dosing: 50×10^6 CD19 CAR-positive T cells
- Follow up: up to 12 months

Anticipated data update

- Initial clinical data expected in late 2024

Partnerships, pipeline programs and technologies

A broad portfolio of potential next
generation modular T cell therapies

Autolus pipeline

* BioNTech holds an option to co-fund and co-commercialize

Leveraging our industry leading technology platform via partnerships

Technology partnerships

Leveraging our modular programming technology to generate safer and more effective therapies

Tumor targeting, pharmacological control and activity enhancement for cellular therapies

Validating collaborations with leading pharma and biotech companies

Potential for value creation through near term option exercise fees, milestone payments and royalties from net sales

Leveraging technology platform for BioNTech's programs

Access to the RQR8 safety switch for selected cell therapy programs for the treatment of cancer

Access to proprietary binders for the development of mRNA-based therapeutics for the treatment of cancer

A strategic multi-platform R&D collaboration with BioNTech

CAR T Cell Therapies

BioNTech to financially support obe-cel planned/potential commercial launch in adult ALL (Acute Lymphoblastic Leukemia) and expansion of development program

Development Product Options

BioNTech to receive co-development and co-commercialization options for AUTO1/22 (CD19/22) and AUTO6NG (GD2) programs

Commercial Infrastructure Access

BioNTech to receive option to access Autolus' GMP product supply and commercial infrastructure for their CAR T program, BNT211

Technology Platform License

BioNTech to receive license and options to access proprietary binders, safety switches and technologies for certain BioNTech programs

Deal Financials

Upfront Payments

- \$200 million upfront for equity
- \$50 million upfront cash

Downstream Economics

- Up to \$580 million in further option exercise and milestones payments
- BioNTech to receive up to mid-single digit royalty on obe-cel project financing
- Autolus eligible for an additional equity investment of \$20m, an option exercise payment and profit share based on products manufactured for BioNTech's BNT211 program
- BioNTech has option to co-fund and co-commercialize AUTO1/22 and AUTO6NG, if approved, in return for profit share
- Technology license and options provided in exchange for milestones and royalties

Upcoming news flow

Autolus planned news flow

Anticipated Milestone or Data Catalysts	Anticipated Timing
Obe-cel FELIX data update at EHA & ASH 2024	June & December 2024
Obe-cel Marketing Authorization Application to MHRA	Second half 2024
Obe-cel U.S. FDA PDUFA target action date	November 16, 2024
Obe-cel in autoimmune disease – initial data from SLE Phase 1 study	Late 2024

Summary

Autolus overview – scaling towards commercialization

Building a leading CAR T company developing therapies for cancer and autoimmune diseases

Obe-cel potentially best in class CAR T for r/r adult ALL

- FELIX pivotal trial showed high ORR, encouraging EFS and favorable tolerability with low levels of high-grade CRS and ICANS
- PDUFA target action date November 16, 2024
- EMA filing submitted

Pipeline expansion strategy

- Expand obe-cel opportunity in B cell malignancies, autoimmune diseases & life cycle strategy
 - SLE
 - B-NHL indications
 - Bi-specific therapies (CD19 /CD22; CD19/BCMA)
- Expand to additional indications with novel CAR T therapies, alone or with partners

Scalable manufacturing and in-house facility

- Demonstrated reliable clinical trial supply (96% target dose reached in FELIX pivotal study)
- New commercial cell manufacturing facility in qualification stage; planned annual capacity 2,000+ batches
- Expected vein-to-delivery time at launch of ~16 days

Strategic collaborations

- Strategic multi-platform R&D collaboration with BioNTech
- Established technology collaborations with Moderna, BMS and Cabaletta
- Long-standing academic collaboration with University College London

Strong cash position

- Cash \$759M end of Q1 2024
- Fully funds obe-cel launch in adult ALL and allows for autoimmune program acceleration

Autolus
